4 Mathematics Challenges

Challenge #1

1. Solve each division problem.
2. Record answers on your brochure.
3. Check your answers in the Mermaid Decoder.
4. Add the seashells to the wallet.
5. Scan the QR code on the next page.
6. Move on to challenge #2.

1. The mermaid uses 360 seashells to make an array on the beach. The array had 15 rows. Which equation could you use to determine how many seashells were in each row of the array?

- a. $360 \div 15$
- b. 15×360
- c. $15 \overline{)360}$
- d. $15 \div 360$

2. There are 24 types of seashells scattered along the beach. In one 20-foot-long stretch of beach, there are 792 shells. If there is an equal number of each type of shell, how many of each type are on this section of the beach?

- a. 33 seashells
- b. 24 seashells
- c. 38 seashells
- d. 41 seashells

3. You find some sea glass as you walk along the beach. When you get home, you add it to the jars in your sea glass collection. You have 468 pieces of sea glass in your collection. How many jars do you have if each jar contains 12 pieces of sea glass?

Challenge #2

1. Solve each word problem.
2. Record answers on your brochure.
3. Check your answers in the Mermaid Decoder.
4. Add the fish eggs to the wallet.
5. Scan the QR code on the next page.
6. Move on to challenge #3.

1. A clownfish lays 5,568 eggs in one season. She lays 96 eggs in each clutch (cluster of eggs laid at one time). How many clutches does she lay per season?

- a. 62

2. An angelfish has a lifespan of 12 years. During its life, a female angelfish will lay clutches of eggs 336 times. If the angelfish laid the same number of clutches each year, how many times does the fish lay eggs per year?

- a. 28 times
- b. 18 times
- c. 36 times
- d. 24 times

4. At low tide, there are some fishermen looking for clams in the sand. The fishermen have found 2,145 clams so far, and they divided the clams equally among 33 buckets. You used long division to determine that there are 65 clams in each bucket. Which equation could you use below to check your answer?

- a. $33 + 65$
- b. $65 - 33$
- c. 33×65
- d. $65 \div 33$

5. There are 15 fishermen clamming. Once they are done, each fisherman takes an equal amount of the 2,145 clams. They use the area model below to determine how many clams each person should take. How many clams does each fisherman take?

	100 clams	30 clams	10 clams	3 clams
15 fishermen	2,145	645	145	45
	-1,500	-450	-150	-45
	645	195	45	0

- a. 100 clams
- b. 57 clams
- c. 133 clams
- d. 143 clams

6. You find a message in a bottle floating in the water. The message contains the division problem below. What error can you find in the division problem?

$$\begin{array}{r}
 1,320 \\
 35 \overline{)4,620} \\
 \underline{-35} \\
 112 \\
 \underline{-105} \\
 70 \\
 \underline{-70} \\
 0 \\
 \underline{-0} \\
 0
 \end{array}$$

- a. There is no error. The answer is correct.
- b. The remainder is missing from the quotient.
- c. They forgot to bring down the 6 from the dividend when dividing.
- d. The 1 in the quotient was written in the thousands place when it should have been in the hundreds place.

4 Mathematics Challenges

Challenge #3

1. Solve each problem with decimals.
2. Record answers on your brochure.
3. Check your answers in the Mermaid Decoder.
4. Add the pearls to the wallet.
5. Scan the QR code on the next page.
6. Move on to challenge #4.

1. The mermaid has two pearls. One weighs 0.56 grams. The other weighs 0.75 grams. What is the total weight of the pearls?

- a. 0.131 grams
- b. 1.31 grams
- c. 1.21 grams
- d. 2.31 grams

2. The mermaid uses some pearls to make a necklace. She has a roll of fishing line that is 4.25 yards long. She uses 0.68 yards to make the necklace. How much fishing line is left on the roll?

- a. 4.93 yards
- b. 3.67 yards
- c. 3.57 yards
- d. 3.56 yards

3. The mermaid shows you three pearls. The pearls weigh 1.08 grams, 0.85 grams, and 0.93 grams. What is the weight of the three pearls altogether?

- a. 2.76 grams
- b. 2.96 grams

4. The table below shows the diameters of different oysters where the mermaid found pearls. How much bigger was the diameter of the biggest oyster than the smallest oyster?

Oyster Number	#1	#2	#3	#4	#5
Diameter (inches)	4.56	3.87	5.4	3.79	5.26

- a. 1.61 inches
- b. 1.25 inches
- c. 1.47 inches
- d. 1.53 inches

5. The mermaid found a sixth pearl inside another oyster. This oyster has a diameter that is 1.04 inches less than the oyster in the table above with the second-largest diameter. What is the diameter of this new oyster?

- a. 3.52 inches
- b. 4.22 inches
- c. 4.22 inches
- d. 5.60 inches

6. The mermaid wants to create a table below with the weights of the oysters, but some of the information is missing. Use the clues to fill in the table. Then, answer the question.

Oyster Number	#1	#2	#3	#4	#5
Weight (grams)		19.81			22.06

CLUES:

- Oyster #1 weighs 151 grams less than oyster #5
- Oyster #3 weighs 3.37 grams more than oyster #1
- Oyster #4 weighs 532 grams less than oyster #3

How much does oyster #4 weigh?

- a. 18.06 grams
- b. 19.43 grams
- c. 18.6 grams
- d. 1785 grams

Scan the QR code or click [here](#) to view the video.

Challenge #4

1. Solve each word problem.
2. Record answers on your brochure.
3. Check your answers in the Mermaid Decoder.
4. Add the doubloons to the wallet.
5. Scan the QR code on the next page.
6. Return the wallet and escape the seal.

1. The mermaid has a treasure chest full of gold doubloons. The doubloons each weigh 6.76 grams. How much do 5 gold doubloons weigh?

- a. 33.8 grams
- b. 34.42 grams
- c. 32.6 grams
- d. 33.08 grams

2. When doubloons were in use, each doubloon was worth about \$412 in the currency of the day (Spanish dollars). How much would 6 doubloons worth?

- a. \$24,072
- b. \$24.72
- c. \$24.72
- d. \$247.20

3. There are also silver coins in the treasure called escudos. There are 8 escudos, and of all the escudos together is 40.64 grams. What is the weight of one escudo?

- a. 50.8 grams
- b. .058 grams
- c. 5.8 grams
- d. 5.08 grams

Challenge #1

1. Solve each division problem.
2. Record answers on your brochure.
3. Check your answers in the Mermaid Decoder.
4. Add the seashells to the wallet.
5. Scan the QR code on the next page.
6. Move on to challenge #2.

1. The mermaid uses 360 seashells to make an array on the beach. The array had 15 rows. Which equation could you use to determine how many seashells were in each row of the array?

- a. $360 \overline{)15}$
- b. 15×360
- c. $15 \overline{)360}$
- d. $15 \div 360$

2. There are 79 seashells scattered along the beach. If there are 79 seashells in each section, how many sections are there?

1.

Two-Digit Division

The mermaid uses 360 seashells to make an array on the beach. The array had 15 rows. Which equation could you use to determine how many seashells were in each row of the array? ☐

- a. $360 \overline{)15}$
- b. 15×360
- c. $15 \overline{)360}$

1 The mermaid uses 360 seashells to make an array on the beach. The array had 15 rows. Which equation could you use to determine how many seashells were in each row of the array?

$$360 \overline{)15}$$

$$15 \times 360$$

$$15 \overline{)360}$$

$$15 \div 360$$

Graphing Points Baking Escape Room

5th Grade

Dear Student,

We love baked goods of all kinds. The boss the best treats you can. Prove you can make the boss will let you go.

You must make these 4 items:

1. Donuts
2. Gingerbread cookies
3. Pie
4. Cake

After each challenge, add the item to the boss.

Sincerely,
The Cookie Criminal

MATH: Classify Shapes Catch the Bandit Escape Room

5th Grade

Dear Student,

You're having a great time visiting the big city! But while you're out seeing the sites, petty crime caught up with you. A bandit stole some money out of your backpack.

You must follow the bandit to catch him and get your money back.

1. Go to the waterfront.
2. Go to Chinatown.
3. Go to the park.
4. Go to Downtown.

After each challenge, add the pin to your map to catch the bandit.

Sincerely,
Friendly Neighborhood Crime Watchers
