Uncovering Sweets: Licorice

Licorice has been a popular sweet treat for centuries. Love it or hate it, it's hard to deny that licorice is one of the most iconic candy flavors around.

Licorice is believed to have originated in the Middle East. It is made from the root of a plant known as *Glycyrrhiza glabra*. This plant has a naturally sweet flavor. The ancient Egyptians were known to have consumed licorice. They used licorice in food and beverages. They also used it as an ingredient in medicine. Licorice was used to treat a variety of sicknesses. This included coughs, sore throats, and even digestive issues. Licorice is believed to have been brought to Europe during the Roman Empire. Soldiers would carry it back with them as part of their rations.

By the 9th century, licorice had become so popular that it was cultivated on farms throughout Europe. However, it wasn't until the 16th century that modern licorice sticks were created. French confectioners discovered how to extract more of its sweetness from its root. This eventually led to the development of licorice extract. This extract is used in many candies today.

In addition to its sweetness, licorice also contains antioxidants. These are beneficial for our health. One of these antioxidants includes glycyrrhizin. It can help reduce inflammation and protect against certain bacterial infections like strep throat or gingivitis. Additionally, licorice has been found to improve heart health by helping lower cholesterol levels and regulate blood pressure.

Licorice-Flavored treats continue to be enjoyed around the world today. Many different varieties are being produced such as chewy candy bars, hard candies, jellybeans, lollipops, and more. There is even an International Licorice Festival held each year in Amsterdam which celebrates all things related to this sweet treat.

Next time you're looking for something sweet, you may want to consider reaching for some classic licorice. Not only does it make for a delicious snack, but its rich history makes it an interesting one, too. Plus, with all the health benefits associated with consuming licorice, you can indulge guilt-free knowing that you're doing something good for your body!

Runny Nose to the Rescue

Boogers are amazing. They are fascinating. They are small clumps of mucus. Boogers consist of dead skin cells. They also contain bacteria and dust particles. Boogers form when the membranes in our noses become irritated. They sometimes become dried out. The body then produces mucus. This is to help combat the irritation. Boogers trap the irritants. Then they carry away the particles.

Booger sizes can vary. They can be very small. They can also be large chunks. Some people eat their boogers. This practice is not recommended. Boogers may contain germs or bacteria. If ingested, this could lead to illness.

Girl Picking Nose

Many people find boogers disgusting. They actually serve a very important purpose. They keep our noses clean. They protect from harmful substances. These substances travel through the nostrils. Research has shown that boogers can trap airborne particles. These particles could be bacteria or fungi. They could cause infections. This is why we should not pick our noses.
