OPTIONS FOR TEAMS

Inferencing
200 points

Photosynthesis is how plants make their food using sunlight. Plants take in carbon dioxide from the air and water from the soil. Using sunlight, they turn these ingredients into food, which is a sugar called glucose, and oxygen, which they release back into the air. This process not only feeds the plant but also adds oxygen to the atmosphere, which is essential for humans and animals to breathe.

PASSAGES

Text Structure
100 points

Which text structure is used to describe the life cycle of a frog?

- | | | | |
|-----------------------|---------------------|-----------------------|-------------------------|
| <input type="radio"/> | a. Cause and effect | <input type="radio"/> | c. Comparison |
| <input type="radio"/> | b. Sequence | <input type="radio"/> | d. Problem and solution |

Frogs go through a fascinating transformation in their lifetime, a process known as metamorphosis. This journey begins with a frog laying eggs in the water. Soon, these eggs hatch into tadpoles, which are baby frogs that breathe with gills and swim like fish. As tadpoles grow, they undergo several changes. Legs start to sprout, tails begin to shrink, and lungs develop for breathing air. Eventually, the tadpole transforms into an adult frog, ready to start the cycle over again by laying eggs of its own.

THIS RESOURCE + 1000S MORE!

you'll  magicore academy!

What's INSIDE?

HUNDREDS of digital, interactive resources for your entire class.

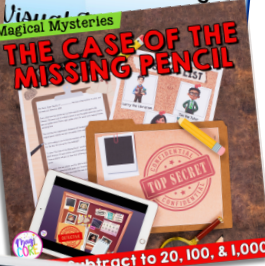

- Assign directly to your students
- Easily differentiate for your class
- Teacher portal to view student responses
- Self-correcting for immediate student feedback
- Audio options
- Engaging animation

Resources include:

- Escape Rooms
- Virtual Field Trips
- Interactive Readers
- Mini Lessons
- Games
- Magical Mysteries

...and more added daily!
